

A Global Extinction

Uppermost Cretaceous dinosaur finds placed on Miller projection map of the world

Image: vemaps.com/world/wrld-22 (Antartica, globe outline, and red dots added. Locations of dinosaur finds are taken from the online Paleobiology Database.)

Fossils of dinosaurs are not found in strata higher than the Cretaceous-Paleogene boundary, anywhere in the entire world. The red dots on the map above indicate where dinosaur fossils have been found in strata just below the Cretaceous-Paleogene boundary. Examples of some of these are illustrated here by models.
